## Sequence 1, Application US/09522714

| Sequence 1, Application US/09522714
| Patent No. 6563020
| GENERAL INFORMATION:
| APPLICANT: Simmons, Carl R. |
| APPLICANT: Simmons, Carl R. |
| TITLE OF INVENTION: Maize Chitinases and Their Use in TITLE OF INVENTION: Enhancing Disease Resistance in Crop Plants |
| TITLE OF INVENTION: Enhancing Disease Resistance in Crop Plants |
| TITLE OF INVENTION: Enhancing Disease Resistance in Crop Plants |
| TITLE OF INVENTION WUMBER: US/09/522,714 |
| CURRENT APPLICATION NUMBER: 60/125,915 |
| EARLIER PILLING DATE: 1999-03-24 |
| NUMBER OF SEQ ID NOS: 32 |
| SEQ ID NO 1 |
| LENGTH: 1094
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (25-APR-2002) Maize Mapping Project, University of Submitted (25-APR-2002) Maize Mapping Project, University of Missouri, Columbia, MO 65211, USA If you are interested in getting corresponding physical clones, these are publicly available from ZmDB and may be found by BLAST searching at MSL, maizemap.org; ZmDB, www.zmdb.iastate.edu; TIGR, www.tigr.org, or NCBI, www.ncbi.nlm.nlh.gov. When the source of the maize cDNA sequences is either Virginia Walbot, Stanford or Pat Schnable, Iowa State, then clones may be requested from ZmDB: www.zmdb.iastate.edu.
